## Sharks

Sharks are one of the sea's most famous predators, but there are some facts that might surprise you...

Sharks are the top carnivores (meat eaters) of the oceans and the top of the food chain eating other fish, dolphins, seals and would you believe it – seagulls! They have the most powerful jaws of any animal and hundreds of teeth that even replace themselves if they fall out!

Strangely enough, not all of them attack people. Often, it is the biggest ones that are the most harmless. The whale shark is the biggest of them all; it eats plankton and small fish and shrimps but it measures nearly 14m – that's about the length of one and a half doubledecker buses!

**Our Reading Comprehension Skills: Explain Retrieve Inference Choice**

**E** How does the word 'powerful' make you feel?

**R** What bird do Sharks eat?

**I** Do you think everyone who reads this is scared of sharks?

**C** Why has the author put (meat eater) in brackets?
